

Synesthetic Memory Box

Project Introduction

The Synesthetic Memory Box is a conceptual project aimed at revisiting our connections as a human to one another by transforming letters into a multi-sensory experience. In a world that often prioritises digital communication and impersonal interactions, this box serves as a tangible reminder of the emotions and senses that define human relationships. Inspired by the concept of synesthesia, where the stimulation of one sense triggers an involuntary experience in another, this project seeks to explore how we can blend sensory elements—sight, touch, smell, and sound—to deepen our emotional connection to people. By incorporating diverse sensory experiences, the box allows individuals to revisit memories through more than just sight or sound. Each sensory layer is designed to evoke an emotion, capturing the richness of human interactions. It explores how human experiences can be revisited and communicated through multiple sensory channels.

엄마가 섬그늘에 굴 따라 가면
아기가 혼자 남아 집을 보다가
바다가 불러주는 사장 노래에
팔 베고 스르르 잠이 듭니다

When Mother

When Mother

When Mother goes to gather

When Mother goes to gather

shellfish

When Mother goes to gather shellfish
in the shaded cove,
the baby waits alone at home, patiently,
as the sea hums a lullaby
the little one gently falls asleep.
